

# SCHOOL ACTIVITIES

**DECEMBER 2019**

## TABLE OF CONTENTS

- **CBSE Reading Challenge**
- **CBSE Expression Series on Water Conservation**

# 1. CBSE READING CHALLENGE

**'READING IS TO MIND WHAT EXERCISE IS TO BODY'**

## **Objectives of Reading:**

1. To develop pupil's love for reading.
2. To enhance the pupil's reading level performance through constant reading programs.
3. To develop pupils' reading comprehension through different reading materials.

Everyone knows that reading is important, as it expose the reader to new things, new information, new ways to solve the problems and start understanding the world in a better way.

To develop the reading habit, Leaders Private School has initiated various reading programs and strategies to ensure that every child becomes a reader and enjoy reading. These programs will strengthen them in development of aptitude and skills in reading and speaking, which will make them productive and empowered individual, a better team member or future citizens.

In the month of December, the students were given a task to read and gather information on the 'Environmental Issues' from the school library as the library is a storehouse of knowledge and students get age appropriate books as per their taste.

Reading environmental books created a positive attitude among the students towards the environment. The students read books on 'Vanishing Forests, Threatened Habitats, Our Warming Planets, Global Warming etc.

It's scientifically proven that books inspire creativity, critical thinking, increase empathy and offer plenty of other incentive to go and enjoy some word power.

## 2. WATER CONSERVATION

CBSE Expression Series on Water Conservation

**“Save water for Today, or Tomorrow you will pay.”**

Without water, life is not possible on the earth. Being residents of the UAE, an Arabian desert, we totally rely on desalinated water from the sea. Hence water conservation is very important.

Leaders Private School, Sharjah has taken up the initiative to save water, by installing water saver taps instead of the older, normal taps. This step facilitates the conservation of up to 70% of the water that had been previously used.

Students practiced using less water both during school hours with the use of the specialized water saver taps. They were able to take a proactive approach towards the issues of water wastage and the need for its conservation. The taps ensure that the increased flow of water is prevented and that the tap stays ‘ON’ only for a preset amount of time. The time crunch makes the students take more efforts to reduce their water usage. These taps have been able to set the bar for the beginning of a new habit of conservation and wastage prevention among all the students at Leaders Private School, Sharjah.

We also have taps which have button to activate the flow of water. When the force of water pushes out the button the flow of water also stops to prevent overflow which in turn conserves water.

The water conservation steps initiated in the School can be followed by other Schools and our Society for a better tomorrow.
