

Information Communication Technology

AIS integrates ICT seamlessly into the curriculum across subjects, enhancing teaching and learning experiences. We use ICT for formative and summative assessments, including digital portfolios, online quizzes, and performance tracking. Our educators prepare students for an evolving digital landscape by teaching them how to adapt to new technologies and learn independently. AIS always educates students about responsible and safe use of ICT, including online etiquette, privacy, security, and copyright issues. We are empowering the students to use ICT to identify and solve real-world problems, applying computational thinking and problem-solving skills. The ICT Teachers always foster creativity by enabling students to use ICT tools for multimedia creation, coding, robotics and other creative activities.
