Circular to Parents of Grades IV - XII: Announcing Habitat Web Development Project

Dear Parents,

“Greetings from IIS Family”

Wishing that you and your family are keeping safe and in good health.

The school is excited to share that we are launching an exciting Web Development Project for our students as a part of their Cyber Square programme. The students will receive technical support, training and research inputs to build and create their own website as a part of this project. The process of choosing the theme of the website and researching its contents will be explained to students over the course of this project by their teachers.

The project will start with the scheduling of orientation and training sessions for students by computer faculty. This is a mandatory school project and your ward will be required to participate and complete the project although for Grade X and XII Board students it will not be mandatory and any of these students will participate only in case of overwhelming interest in this project. For all students of grades IV-IX and XI where this project work is mandatory, it will be counted towards practical marks weightage as well.

We hope to make this exciting and engaging for all our students and lead them into becoming technology creators and innovators, a pledge that we have always sought to uphold.

This project will run over most of October and November 2021 and will culminate in a grand event that will see all students launching their website and share their creation with the public. It will be a proud moment for all of us.

We request you to encourage your ward and support in all ways possible for him/her to have an enriching learning journey.

Stay Safe & Healthy!
